

Stargazing with Telescopes

The background of the entire page is a photograph of a night sky. The Milky Way galaxy is visible, stretching across the frame with its characteristic pinkish-purple and white star fields. In the lower right, two silhouetted figures, an adult and a child, stand on a dark ridge. The child is pointing towards the stars. The overall scene is dark and atmospheric, with the stars providing the primary light source.

Join us for a brief talk on Astronomy with members from the Syracuse Astronomical Society starting at 9:00pm and then moving outside for a look through different telescopes located throughout the park to see different star clusters, galaxies and colorful nebulae. Bring an extra jacket. Even an 80 degree day gets cold at night. Long pants, shoes and socks, too. No shorts or flip flops, after all, this is tick season in CNY. Bring binoculars if you have them.

WHEN: Friday, May 26th 9:00pm – 12:00am

(rain date Saturday, May 27)

WHERE: Austin Park Pavilion

1 East Austin Street, Skaneateles, NY

Sponsored by the Town of Skaneateles
